

## Main Features

- Newly developed 40mm aperture driver generates clean and clear audio output with increased bass response
- Special sound-isolating “air chamber” on the bass reflex port helps eliminate background noise
- Lightweight and flexible polyamide resin headband and snug fitting ear cups ensure comfort even during prolonged use
- Soft, extremely comfortable low-resilience urethane memory foam ear pads
- Earcups are designed to move vertically along the slider arms offering a total of 15 different positions, and the slider arms can be rotated up to 90 degrees in each direction
- The headband, earpads, housing, cushion and cables can be removed and replaced (parts sold separately) for greater longevity

## FEATURES

### 1 Sound Quality

The HDJ-C70 utilizes large 40mm drivers specially tuned to produce the lower bass frequency region in music. The combination of large 40mm drivers, copper-clad aluminum wire (CCAW) voice coils, neodymium magnets, and 2,000 mW input capacity helps to generate clean and clear audio output with increased bass response.

40mm Driver

### 2 Sound Isolation

The new headphones are also designed to help minimize loud background noise, often found in loud environments such as a DJ booth, by utilizing a special sound-isolation "air chamber" integrated into the housing of the earpiece. The innovative air chamber also helps to isolate low and mid frequencies resulting in better defined mid bass/mid range sound output.

Air Chamber

### 3 Comfort and Fit

The headband of the HDJ-C70 is made of a polyamide resin for maximum flexibility, to accommodate the constant pulling and twisting of the headphones by users. The ear cup housing also utilizes a ridged rubber ring for easier gripping of the headphones and reduced chances of slipping.

For an ultra-comfortable fit and to conform to different head sizes the ear cups of the HDJ-C70 are designed to move vertically along the slider arms, offering a total of 15 different positions. Furthermore, the slider arms can be rotated up to 90 degrees in each direction, providing the greatest flexibility for different styles of DJing.

The model incorporates soft, extremely comfortable low-resilience urethane memory foam ear pads to create a nice seal around the ears which also helps in reducing induced external sounds. The urethane memory pads are wrapped in soft black leather for maximum feel and extended comfort.

### 4 Interchangeable Parts

Furthermore, the HDJ-C70 features interchangeable parts for greater longevity. The headband, earpads, housing, cushion and cables can be removed and replaced (parts sold separately). The headphones are pre-installed with a 1.6m straight cord which but can also be swapped with an 1.0m coiled cord (included). A compact carrying pouch for added protection and convenience comes with the unit.
