LST-1500

## 1500 Watt Strobe (with DMX)

First, thanks for choosing our 1500 watt strobe light, in order to make you use the light safely, please operate it according to the products instruction. At the same time, please keep the instruction in good condition for the future using.

### **Installation:**

1. The light could be fixed at any place, but the distance between it and people or thing should be at least three meters. It should be fixed tightly and in safe operation. The light should be connected with ground. Don't make the light get to water or other liquid and metal objects.
2. You should make sure that the power in factory and strobe is accord with your local power. When you connect the light correctly, you can just open it.
3. Sound control and adjusting speed product, you could adjust the machine according with the sound and speed until you are satisfied with the effect.
4. When the tube is almost to life, please exchange it timely. If you want to change the tube, please turn off the light and wait for twenty minutes.
